RE: Digital GIS Base Map Development Services
Pricing for additional Scope of Work

Dear Don:

Listed below are the additional costs to add 400 feet along the northern most portions of the project.

Item A:

Add 400' of 2-foot DTM, contours, and 0.5' GPR orthophotography north of the Priority 1 area that has been completed. This will involve the reprocessing and re-submittal of 5 tiles. Additional cost is \$3,532.

Item B:

Add 400' of 5-foot DTM and contours north of the existing 5-foot project limits. If requested at this time, then this will only involve the collection and processing of the additional data and will not incur any rework of topo or orthophotos in these areas. Additional cost is \$640.

Item C:

If Item B is requested after those 5-foot areas have been processed for delivery, then the effort will involve rework and the additional cost would then be \$3,834.

As you can see it would be most cost effective to add the 5-foot areas at this time rather than waiting until we have finished the existing 5-foot project limits. It is beneficial to you from a cost viewpoint and to us from a production viewpoint.

Please let me know your decisions at your earliest convenience and contact me with any questions.

Sincerely,

Surdex Corporation

J. Michael Brown, PSM
Project Manager
