

BILLBOARD AT ANAMOSA AND LACROSSE

-Prior to 2002, Lamar had a wooden structure with 4-10X28(2 faces-560 sq. ft. /side) billboards on it. September 22, 2002 we applied for a conditional use permit to rebuild it to its current status with 240 sq. ft. /side. The size of the billboard now is 42% of what it was originally. The conditional use permit was approved and the billboard was built as it is today.

-March 7, 2008 we applied for and received a permit (over the counter) to remove the 240sq. ft. south poster face and install a 240 sq. ft. digital. We completed the work

-We are now applying to remove the 240 sq. ft. north poster face and install a same size. digital similar to the digital on the south face. We will do no extra alteration to the structure. What we asking to do is to pick up the existing face and hang the digital in its place.
