COMMENTS ON NEIGHBORHOOD (CONT)

and the tourism industry are the largest employers in the area. Schools, shopping, parks are nearby and conveniently located within 5 minutes within the community.

SITE COMMENTS (CONT)

At the present time there is very little traffic noted on the road and within the subdivision. It is beyond the scope of this appraisal to determine the affect on value that any future changes in use of the surrounding and nearby land may have on the subject parcel.

The subject's highest and best use is as a primary residence, single family dwelling. The following four tests form the basis for determining the highest and best use of property: Physically Possible, Legally Permissible, Financially Feasible, Maximally Productive.

The appraisor's conclusion of highest and best use is also based on it's location, current zonling, conformity to surrounding land use, and the assumption that there are no hidden or unapparent conditions of the property that might impact upon its current use.

The appraiser made no verification of subject's site's buildability and the appraiser's conclusion of value is based on the assumption that there are no hidden or unapparent conditions of the property that might impact upon buildability. The subdivision may have covenents or restrictions which also may restrict or impact the subject's buildability or use. Appraiser recommends due diligence be conducted though local building department to investigate buildability and whether property is suitable for intended use. Appraiser makes no representations, guarantees or warranties.

Appraiser cannot guarantee that the subject property is free of encroachments or easements. The site is served by typical public utilities of power, water, sewer and phone and is assumed to have typical utility easements. The boundaries of the lot may be visible and marked by stakes, monuments or fences, however the accuracy of these boundaries was not checked. A property line survey should be performed by local surveyor if more information or accuracy is desired.

FEMA Flood data: The FEMA flood hazard information on page 1 of this report, if available, cannot be guaranteed by the appraiser. The appraiser is not a qualified expert in the determination of flood hazards and makes not representation as to the FEMA Flood Zones or the necessity of flood insurance for the subject. Unless otherwise noted, Flood information noted in this report was obtained from FEMA data services online and boundaries may not be accurate. The user of this report is advised to obtain a separate independent flood certification for final determination of flood zones.

COMMENTS ON COMPARABLES (CONT)

Comp 3 is a similar sized lot which is located nearby. Comp 4 is a very recent sale of a larger lot. It is not known whether more than one home could be built on that lot, but it was sold as one parcel, zoned low density residential. Comp 5 is an older sale of a similar sized residential lot.

Comparable land sales Indicate that lots in the area generally sell from \$11,000 to \$36,000 with the higher end in the newer subdivisions at the northern edge of town and the lower end appear to generally be difficult or unbuildable lots. Lot size adjutments or residential lots are generally not based on a per sft or per acre price, but generally based the amount of surplus land on one buildable lot. In general, largest portion of a lot's value is given to the building site and a smaller value for surplus land. The adjustment used for the market grid are at \$5,000/ac are made based on the market value of surplus land which generally is not subdividable and is value is based on the law of diminishing value as the excess acreage increases, it is worth less to the average residential buyer.

It is noted that the local MLS System data does not reliably report Seller paid closing costs or other concessions. Many real estate agents and brokers refuse to report this information to appraisers or any third party due to confidentialty or privacy concerns. Based on appraisers' file information where the purchase agreements have been reviewed, seller concessions of approximately 3% of purchase price are typical and accepted in this market as part of any transaction. Any known or reported unusual or atypical concessions which affected the sales price are noted and appropriate market adjustments are made.

RECONCILIATION:

The market approach is considered the most reliable indicator of the estimated value as it best reflects the reactions of typical buyers and sellers in a given market area. In this market area, there adequate reliable data to devlope a credible result.

The cost approach was not developed as this is vacant land and the cost of construction is not applicable. The income approach to value was considered but not developed on this report due to the lack of reliable data. Land in this area is generally not purchased for income purposes. And there is no available reliable data.

Electronic SignatureThis appraisal report was transmitted electronically by EDI or PDF format. I certify that the digital signature placed on this report originated with the person signing it and that it was not tampered with after the signature was applied. This digital signature has the same force and effect as a manual signature and complies with all Federal and State laws. This signature has been password protected and cannot be access by any other person or by any other means. Verification of Sales was done via MLS, Listing Agt, Selling Agt, Buyer, Seller of Public Records. As MLS is the most timely and verifiable sourse, the MLS number is given whenever possible as well as Listing agents number. Comparable sales photos are occasionally used from internet, mls files, or appraiser's data files as this best depicts the condition of the comparable property at the time of its sale. Due to that, there may be a For Sale sign showing in the photo. The comparable property is physically inspected from the street at the time of the appraisal to determine if it is compatible with the subject. This compiles with Fannle Mae underwriting guidelines

The Intended User of this appraisal report is the Lender/Client. The Intended Use is to evaluate the property that is the subject of this appraisal for a mortgage finance transaction, subject to the stated Scope of Work, purpose of the appraisal, reporting requirements of this appraisal report form, and Definition of Market Value. No additional Intended Users are identified by the appraisar.

Scope of Work:

The appraisal Scope of Work is defined by the complexity of this appraisal assignment and the reporting requirements of this appraisal report form, including the definitions found on prior pages of this report. The appraiser performed a visual inspection of the interior and exterior of the subject property. It is noted that this does not constitute a home inspection but only a visual observation of the features of the property in order to get a better understanding of the overall condition and features in comparison to other homes in the market.

The subject lot was viewed on 7/5/10 and appraiser walked around to lot to determine the general location of the boundaries as well as the size, layout, topography, landscaping and other relevant characteristics are noted in order to compare with other relevant properties.

Some of the boundaries of the lot were generally considered visible based on changes in landscaping and existing fences, however the accuracy or size of these boundaries was not measured or checked. If more information or accuracy is desired, a local surveyor should be contacted to determine the boundaries, the location of the improvements on the lot and location of any easements of record. Subject has public utilities and is assumed to have typical utilities easements. If more information regarding location of these or other easements of record is needed, interested parties should review the title report. The title report was not available to the appraiser for review and the appraiser cannot guarantee that the subject property is free of encroachments or easements and the boundaries of the lot were not verified.

Available data sourses are consulted which include Real estate agents, local builders, local MLS information on-line. Public records information and maps at county offices or on-line. Information is analyzed and any discrepancies in information are reviewed and the most reliable sourse is used. Significant descrepancies are analysed and the date is not used if not considered reliable to the degree necessary for comparison purposes.

Information is reported by report method most often used by residential appraisers in this area and analysis is summarized in a format which is generally understandable by typical users of this report.

APPRAISER'S CERTIFICATION:

The following Certification statements are in addition to and may supersede the signed Appraisar's Certification attached to this appraisar report. This Appraiser's Certification is compliant with the current edition of the Uniform Standards of Professional Appraisal Practice.

I certify that, to the best of my knowledge and belief:

The statements of fact contained in this report are true and correct.

The reported analyses, opinions, and conclusions are limited only by the reported assumptions and limiting conditions and are my personal, impartial, and unbiased professional analyses, opinions, and conclusions.

I have no present or prospective interest in the property that is the subject of this report and no personal interest with respect to the parties involved.

I have no bias with respect to the property that is the subject of this report or to the parties involved with this assignment.

My engagement in this assignment was not contingent upon developing or reporting predetermined results.

My compensation for completing this assignement is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.

My analyses, opinions, and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice.

I X have have not made a personal inspection of the property that is the subject of this report. (If more than one person signs this certification, the certification must clearly specify which individuals did and which individuals did not make a personal inspection of the appraised property.)

No one provided significant real property appraisal assistance to the person signing this certification. (If there are exceptions, the name of each individual providing significant real property appraisal assistance must be stated.)

PURPOSE, INTENDED USE, AND INTENDED USER OF THE APPRAISAL:

The purpose of the appraisal is to estimate the market value of the subject property, as defined in this report, as of the effective date of this report. The intended use of the appraisal is to assist the client and any other intended users in the underwriting, approval, and funding of the mortgage loan. The intended users of this report are the stated client and any other institutions involved in the underwriting, approval, and funding of the mortgage loan. No one else, including the purchaser and seller, should rely on the estimate of value or any other conclusions contained in this appraisal report.

ANALYSIS AND REPORT FORM:

The appraisal is based on the information gathered by the appraiser from public records, other identified sources, inspection of the subject property and neighborhood, and selection of comparable sales, listings, and/or rentals within the subject market area.

The original source of the comparable data described in the Data Source section of the market grid along with the source of confirmation provided, where available, the original source is presented first. The sources and data are considered reliable. When conflicting information was provided, the source deemed most reliable has been used. Data believed to be unreliable was not included in the report or used as a basis for the value conclusion. The extent of the analysis to this assignment is stated in the Appraiser's Certification included above and attached to this report.

DEFINITION OF INSPECTION:

The term "Inspection", as used in this report, is not the same level of inspection that is required for a "Professional Home Inspection". The appraiser does not fully inspect the electrical system, plumbing systems, mechanical systems, foundation system, floor structure, or subfloor. The appraiser is not an expert in construction materials and the purpose of the appraisal is to make an economic evaluation of the subject property. If the client needs a more detailed inspection of the property, a home inspection, by a Professional Home Inspector, is suggested.

DIGITAL SIGNATURES:

The signature(s) affixed to this report, and certification, were applied by the original appraiser(s) or supervisory appraiser and represent their acknowledgements of the facts, opinions and conclusions found in the report. Each appraiser(s) applied his or her signature electronically using a password encrypted method. Hence these signatures have more safeguards and carry the same validity as the individual's hand applied signature. If the report has a hand-applied signature, this comment does not apply.

OPINION OF MARKET VALUE VS ESTIMATE OF MARKET VALUE:

The current Uniform Standards of Professional Appraisal Practice defines the market value conclusion as an opinion of market value and not an estimate of market value.

THREE YEAR SALES HISTORY FOR THE SUBJECT PROPERTY:

The appraiser has complied with Standards Rule 1-5b and 2-2b (lx) requiring the appraiser to analyze and report all sales of the subject property that occurred within the three (3) years prior to the effective date of the appraisal. If this information was available to the appraiser(s), it is reported in the subject column of Sales Comparison Analysis section of the appraisal report.

EXPOSURE PERIOD:

By studying the sales of similar comparable residential properties with value ranges as identified in the Neighborhood section of this report and discussions with individuals knowledgeable of current neighborhood trends in the subject area, the appraisar feels that the exposure time for the subject property is equal to the indicated Marketing Time identified in the Neighborhood section of this appraisal report.
