

Netting

stop flying trash

GF-3sm is made from very high strength monofilament olefin polymers. The resulting product maintains a high level of strength throughout it's 16 year projected lifetime. By design, GF-3 is not effected by acids, alkalis or even hydrogen sulfide. When conditions demand the most, -30° to 120°F, high winds etc., GF-3 continues to perform. High tenacity per weight means less surface area for overall strength. This reduces wind resistance and snow/ice loads. GF-3 is self extinguishing.

GSQsm is made to stand with minimal support. Ideal for temporary fences. Available in 4' and 8' heights.

Easy to install; cut to size at the job sight. Tightloc® construction will not unravel when cut. Hog ring directly to cable or chain link, staple to wood, or tie wrap to pole structures.

Made in the USA by Roxford Fordell.
