

Preliminary Plat of
 LOT 1 of BLOCK 1,
 and LOTS 1, 2, & 3 of BLOCK 2,
 MENARD SUBDIVISION
 UTILITIES - STORM WATER

Two existing Storm Water Sewers
 already cross site

An existing 30" line crosses SD Hwy 16 (East North) and the property to the south. An existing 18" line crosses the property from inlets at the intersection of E Anamosa and Eglin, crosses the 30" line, and like the 30" line, discharges into an open basin and drainage easement to the south (in unplatted land). Improvements to system to meet SDDOT requirements, allow collection of storm water from Creek Drive, and lots are shown - including replacement/rerouting of some existing elements. All installation of storm water conveyances shall comply with current City requirements and code as of the date of installation.
