

PROJECT NARRATIVE

The Public Works Dept./Engineering Services Division has begun converting a vacant portion of the City-owned 760 Centre St. building into a shop & offices for its traffic signal, roadway signing, roadway lighting and pavement marking operations. For the purpose of having a secure vehicle storage area (for nine PW/Engineering Services vehicles), it is proposed to install six-foot high chain link fencing in front of the building. The proposed fence will match the height of the existing fencing around the facility. Presently, the building serves as Rapid Transit's vehicle storage and wash area. The Police Department will also eventually be using a portion of the building.
