Re: **City of Rapid City Engineering Services  
Saint Andrew Street Reconstruction Project  
Project No. ST10-1803, CIP 50714**

The City of Rapid City proposes to reconstruct Saint Andrew Street from the intersection of Lincoln Avenue East two blocks to Elm Avenue. This two-block section is the second and final phase of the reconstruction of Saint Andrew Street between Fifth Street and Elm Avenue. Included within the project limits is the intersection with Maple Street.

The principle objectives of the Saint Andrew Street reconstruction project are as follows:

1. Reconstruct/re-grade the street. The street is in poor condition with steep cross slopes. The street also has differential settlement which creates drainage ponding in the gutter flow lines.
2. Construction of an 8-inch PVC water main which will parallel the existing 20-inch transmission main. The City has requested that existing services tapped into the 20-inch main be switched to the new 8-inch PVC main.
3. The existing 8-inch VCP sanitary sewer will be replaced with an 8-inch PVC main. The existing VCP sanitary sewer has problems with I&I, roots, and offset joints. Sewer services will be replaced to the property line.
4. Install ADA curb ramps at intersecting streets.

Please refer to the project plans for specific information regarding proposed improvements.
