Rapid City Growth
Management Department

11-6-19 SDCL Review proposed or intended use:

The purpose of this project is to improve storm water discharge quality to Rapid Creek from Omaha Street and the downtown area. This will be accomplished by diverting initial storm water run-off from three existing storm pipes to three storm water holding ponds, where sediment and contamination will separate from the storm water prior to discharging to Rapid Creek.

This project includes concrete diversion structures, concrete storm pipe, concrete outlet structures, and grading, restoration and landscaping necessary to construct the three storm water holding ponds.
