RE: Conditional Use Permit

Jim,

The application for conditional use permit requests a written statement describing the proposed or intended use of the project. The proposed Saint Patrick Street Odor Control facility will involve placing odor control equipment in a simple building. A sanitary sewer siphon passes wastewater under Rapid Creek near the proposed building location. Odor laden air is expelled from the sanitary sewer at this location. The proposed project will capture this air and pass it through biological treatment equipment. The building will be connected to water, sanitary, and power utilities. An air pipe will supply odor laden air from the siphon structure to the equipment. The building will not be staffed and should require very little maintenance. Please let me know if you require any additional information.
