Re: Verizon Wireless Conditional Use Permit for 636 Cathedral Drive.

Jim,

As per our previous conversations, Verizon Wireless is in the process of upgrading their wireless network to the 4th Generation Technology known as "LTE" (Long Term Evolution). As technology advances, it is necessary for Verizon Wireless to upgrade their equipment, which will consist of replacing certain antennas at the site.

We plan on removing the 6 existing antennas on the building and replacing them with 6 new antennas. We will also be extending our platform and adding 1 cabinet inside the enclosed penthouse. The enclosed plans describe these items in detail.

Please place us on the next available Planning Commission agenda for review. I appreciate your time and effort on this project of ours.

Cordially,

Curt Walter
Agent for Verizon Wireless
