

**Engineering Division Request to Solicit  
PROPOSALS  
for  
Centre Street Sanitary Sewer Extension  
PROJECT NO. 50275  
SS00-940**

---

**PROJECT DESCRIPTION**

The City of Rapid City proposes to design and construct a new sanitary sewer in the vicinity of Centre Street near the Fairgrounds on either side of Campbell Street. Design services shall include alignment analysis, preliminary design report, preparation of easement exhibits/agreements, and plans, cost estimates, and specifications preparation.

At its March 2, 2004 meeting, the City of Rapid City Council established a Resolution of Necessity for the assessment of adjacent properties to construct the sewer improvements in this area of the City. Inadequate septic systems and the need for sewer service for expanding commercial properties in the area substantiate the need for the project. The project includes approximately 2/3 mile of new and reconstructed sewer to be constructed at a preliminary estimated cost of \$390,828.00. The project is slated for design and construction in 2004.

Funding for the project is from the Sewer Enterprise Fund and SAB-28 funding. Coordination with adjacent property owners and/or Developer's will be encouraged to select the best sewer main alignment option that will best serve the build out of the area.

Design criteria for the project shall include the "City of Rapid City Standard Specifications, 2002 Edition"; "Recommended Standards for Wastewater Facilities" (Ten State Standards, latest edition); and "Design Criteria Manual for Water Distribution Systems and Sanitary Sewer Collection Systems for the City of Rapid City" (Draft).

Justification: Resolution of Necessity passed by City Council dated March 2, 2004.
