RE: Revised Fence Proposal

Black Hills Power requires a fence that meets all regulatory codes that are intended to protect the public from any hazardous equipment. At the same time, we are aware of our responsibility to do what we can to minimize the visual impact of the substation expansion. Black Hills Power requests the approval of a wrought iron fence similar to those shown in the attachments per the recommendations of City Council members and several of the substation neighbors. The entire outside perimeter of the substation would consist of the wrought iron fence with brick/concrete corner and gate posts. The proposed fence location is attached and shown in bold.

**Fence Specifications**

Black Hills Power requires, at a minimum, an eight foot tall fence on the outside perimeter of the substation. Additionally it is important that the fence is constructed in such a way to prevent unauthorized people from entering the substation.
