Public Works Committee/Common Council

RE: Request Authorization to Seek Proposals for Engineering Services for
North Rapid Booster Station Reconstruction, Project Number 13-2080, CIP #
50812

Staff proposes to construct the new North Rapid Booster Station to be located in the northwest corner of the intersection of Anamosa Street and Farlow Avenue. City Engineering has coordinated with the Parks Department and has designated the northwest corner of 220 College Avenue for the new booster station. A new booster station is proposed to replace the existing station because the existing booster station's design life has been exceeded. The booster will be designed for development growth in the North Rapid pressure zone (North of Interstate 90).

Staff proposes to hire a Consultant for designing, bidding, and providing construction observation, administration and project closeout.

The project is funded from the Water Replacement/Improvement funds and Water Expansion funds. The project budget is approximately nine hundred thousand dollars (\$900,000).

Staff proposes to design, bid and construct the project in 2013.

Dale Tech, PE

City Engineer
