**Subject:** Building new amendment to Hawthorne Ave

To the City of Rapid City  
Community Planning and Development.

I live on the corner of Hawthorne Ave and Mead St. 2131 Hawthorne Ave. which is a residential property. I know this proposal was already debated and rejected by the residence and property owners here. It seems that the city council is bond and detirmined to build this street. I see a problem with entrance to it from Saint Patrick St. It would be on a down hill slop from the west and probally in between bussiness. which is the current problem with the one street to st patrick to the east. The road itself will be on a very graded hill to the intersection of Mead St and Hawthorne. Which in the winter time in slick conditions will be a prefect t-bone event. The creek that runs through there would have to be inproved, espeacially since upstream has had inprovement and when we get a down pour the creek over runs the streets, since the down stream has not been inproved. There would have to be a large culvert put in to abate it from being over runed. I am not in favor a having this so called inprovement because, with the access there will be much more traffic coming through and the way the street is set up in your drawing they will be facing straight into my property. I have already had vehicles coming around the corner west bond meade st turning into Hawthorne and slide into my property. Will the city do something to stop an out of control vehicle sliding into my house? Will they be liable for any damage?

Like I said, this was rejected before. I beleive for good reason. Unless you can ensure me that cars will be able to stop in slick conditions and the drainage ditch will be inproved. I strictley oppose the plan.

Sincerly  
Kenneth Heying
